

# Cash Sales Order Splitter

*Do your customers want you to split orders between different ledger accounts? Do you sell fresh produce that is frequently paid for with cash?*

Price Guide: £1500 per site plus ALF

The Sales Order Splitter automatically splits one order into two. These two orders can then be posted to separate ledgers if required, potentially one for cash and another on account. This enables these orders to be processed quickly and easily.

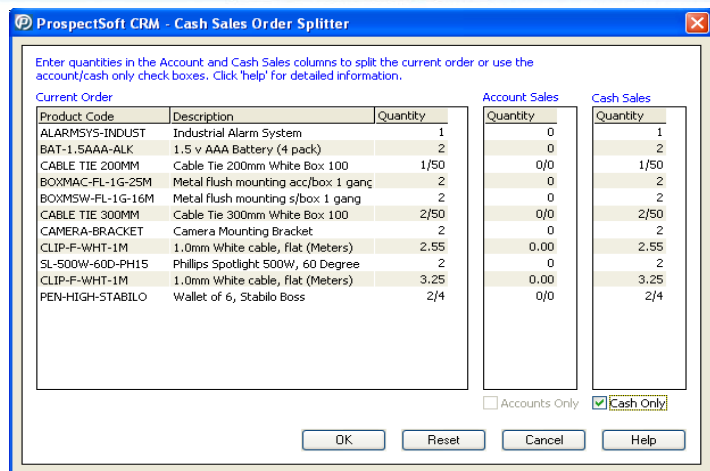

For many companies, perhaps who sell on a cash and account sale basis, there is an issue with maintaining sales information in their CRM system. The ProspectSoft sales order splitter makes it quick and easy to enter orders split into cash and account sales, saving time and keeping the sales account information up-to-date and accurate.

## Key Features

- Cash or accounts only tick boxes
- User tabs on the quote level display the order status, split order number and the sales ledger the current quote has been confirmed on.
- If interrupted the details of the orders will be stored so that the user can return to them at a later date.

## Benefits

- Order Status displayed on user tabs.
- Reduces the administration time and effort, and therefore avoids the possibility of manual errors in splitting orders.

## Typical Users

Any company selling on a cash and account sale basis.

Many companies which sell fresh produce have this requirement.

## Dependencies

The Cash Sales Order Splitter Option requires that the following ProspectSoft modules be installed

- B2B or B2C Contact Manager
- XML API \*
- Products and Pricing
- Quotation Engine
- Sales Ledger Integration
- Sales Order Processing

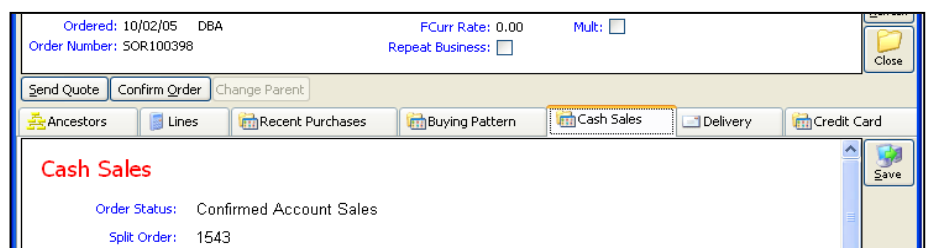

## Related XML API Options

- Telesales rapid order entry
- Outstanding order checker
